DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-26, drawn to method, apparatus, machine-readable medium of synthesizing, embedding audio signals (auditory scene parameter), classified in class 381, subclass 119.
 - II. Claims 27-48, drawn to an encoded audio signal, classified in class 700, subclass 504.
 - III. Claims 49-54, drawn to an encoded audio bitstream (by audio data processing), classified in class 700, subclass 94.
 - IV. Claims 55-72, drawn to an decoded audio signal, classified in class 704, subclass 503.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, and II, III, IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different operations because the different inventions all have different operations i.e., an audio processing for

synthesizing, embedding audio signals; encoding audio signal; encoding audio bitstream; and decoding audio signals.

3. Inventions II, and III, IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different operations because the different inventions all have different operations i.e., encoding audio signal; encoding audio bitstream; and decoding audio signals.

4. Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different operations because the different inventions all have different operations i.e., encoding audio bitstream; and decoding audio signals.

5. In addition, because of the different classification of each Group based upon the distinct modes operation, a serious burden is imposed on the examiner to perform a complete search of the defined area in both the patent and non-patent literature. Therefore, because of the reason given above, the restriction set forth is proper and not to restrict would impose a serious burden in the examination of this application

6. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims is allowable, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
